Portfolio
https://heatmarie.github.io/portfolio/

I have a strong desire to see things through to the end which is why being a full stack developer interests me. I like dabbling in design as well as building functionality through Javascript and the many different resources such as React that when put together can create something magnificent.

EXPERIENCE

Blitz and Chaos (An Interactive Story)
Two weeks
https://heatmarie.github.io/BlitzandChaos/

In this group project I focused on the design, and story of the project. In the two weeks, I wrote the majority of the story, used Bulma and CSS to add style, then implemented the story content into the JS.

Weather Dashboard
One week
https://heatmarie.github.io/weatherDashboard/

This project utilized server-side APIs and local storage. I used the OpenWeatherMap Api to get current weather conditions. After the user searches for a city, buttons are dynamically created for recent search historys with an eventListener that will allow the button to activate the search again.

Day Planner
One week
https://heatmarie.github.io/dayPlanner/

A project with a focus on third-party API's (Luxon) and local storage. Each hour is color coded by past, present and future and the user's imput is stored and retreived using local storage.

Password Generator
One Week
https://heatmarie.github.io/PasswordGen/

This was my first experience creating an application with Javascript. Based on user input, it gets a specified number value and strings together a password with a combination that the user selects.

SKILLS

- Angular
- node.js
- React.js
- MySQL
- MongoDB

- HTML5
- CSS
- Javascript
- JSON
- APIs
- Responsive Design

EDUCATION

University of Minnesota
Full Stack Web Development Certificate
Est. Completion Oct 2021

CARL SANDBURG COLLEGE
Associates of Arts
2019
